

Seasoned network architect and reliability engineer with 25 years of experience leading the conception, architecture, development, design, and implementation of software, hardware, and network systems and tools that improve the capacity, efficiency, operability, performance, reliability, and security of global backbone, cloud, data center, and enterprise networks. Proven track record of designing and deploying multi-terabit WAN, peering, and AI/ML data center networks.

TECHNOLOGIES AND LANGUAGES

Network Architecture & Design Multi-terabit WAN, DC interconnect, and peering architecture - EVPN/VXLAN fabric design for AI/ML and GPU clusters - Lossless Ethernet transport (RoCEv2, PFC/ECN, DCQCN) - Multi-vendor platforms; Arista, Cisco, Juniper, Mellanox, Cumulus Linux - Routing protocols; BGP/MP-BGP, IS-IS, OSPF, MPLS, RSVP-TE, LDP - Hybrid multi-cloud interconnection (AWS, GCP, VPC, VPN) - Security infrastructure; Palo Alto, VRF segmentation, ACLs, VPN (IPSec, SSL)

Automation & Platform Engineering Configuration management and compliance enforcement (Ansible, Salt, Puppet) - Network automation frameworks (Nornir, Jinja, FastAPI) - Infrastructure as Code (Terraform, Pulumi, OpenTofu) - Production tooling development in Go and Python - Zero-touch provisioning pipelines and CI/CD integration - Source-of-truth and IPAM platforms (NetBox, Nautobot, Infoblox)

Observability & Reliability SRE practices; blameless post-mortems, SLO definition, incident response - Monitoring and alerting (Sensu, PagerDuty, Splunk, LibreNMS, Zabbix, Nagios) - Flow analysis and network telemetry (netflow/sflow, SNMP, syslog) - Performance engineering and capacity planning - Risk assessment and disaster recovery planning - Deep troubleshooting and root-cause analysis

Software Development Go and Python for production-grade network tooling - Bash, SQL, YAML, JSON, HTML, CSS - Git, Sapling/Mercurial, Make - Containerization (Podman, Docker) - C, Java (working knowledge)

Cloud Infrastructure AWS and GCP networking (VPC, transit, peering, CDN, load balancing) - Digital Ocean, Linode - Hybrid and multi-cloud architecture design

PROFESSIONAL EXPERIENCE

BayRockLabs

Santa Clara, California

Principal Network Engineer @ NVIDIA

Apr 2026 – Oct 2026

- Design and deploy global-scale DC interconnects and EVPN/VXLAN fabrics for GPU computing clusters; tune lossless Ethernet transport (RoCEv2, PFC/ECN) to meet the strict latency and packet-loss requirements of distributed AI training.
- Collaborate with systems and HPC teams to deliver scalable, highly available networks while establishing best practices for security and compliance.

Magnit, LLC

Menlo Park, California

Network Engineer 5 @ Meta

Oct 2023 – Oct 2025

- Contract-lead for cross-functional projects to design and deliver scalable and reliable WAN and DC infrastructure for AI/ML workloads, including 3+ Tbps for DC-interconnect, and EVPN/VXLAN fabrics supporting PTPv2 and RoCEv2.
- Developed and maintained configurations for multi-vendor, multi-terabit WAN and data center infrastructure supporting Meta's product engineering and research labs.
- Transformed the onboarding process from an eight-week individual ramp-up into a week-long, team-specific curriculum used to onboard over 20 new CW and FTE engineers.

Adobe

San Jose, California

Senior Cloud Network Reliability Engineer

Sep 2021 – Dec 2022

- Provided technical leadership for the global corporate network team, defining and implementing network engineering standards, patterns, and practices to optimize cloud-based solution delivery.
- Designed, deployed, and maintained Adobe's hybrid network and security infrastructure, including SDN, routers, switches, Palo Alto firewalls, wireless, DDI, and VRF segmentation.
- Championed SRE rigor by instituting blameless post-mortems, sustainable on-call rotations, and automated configuration management to reduce toil and improve SLO attainment.

Box

Redwood City, California

Senior Network Engineer

Nov 2019 – Sep 2021

- Led cross-team initiatives to design, provision, and enhance the global WAN, data center, peering, and multi-cloud infrastructure underpinning Box's hyper-scale SaaS platform.
- Engineered and maintained automation frameworks (Ansible, Python, Jinja, Puppet) for configuration, security, ZTP, upgrades, and day-to-day operation across Arista, Juniper, and white-box Cumulus devices.
- Partnered with NRE to overhaul network monitoring and observability with Sensu, PagerDuty, LibreNMS, and Splunk, significantly improving alert utility and signal-to-noise ratio.
- Participated in on-call rotation, driving permanent fixes through root-cause analysis rather than reactive workarounds to reduce recurring incidents.

HERE Technologies

Alpharetta, Georgia

Principal Network Engineer

Aug 2018 – Oct 2019

- Introduced Ansible-based automation to enforce compliance, improve standardization, and reduce deployment times across global hybrid multi-cloud network infrastructure.
- Performed extensive troubleshooting to identify software bugs and rewrote QoS policies, resolving long-standing issues and improving global throughput by 5-10x.
- Led the edge network redesign and hybrid multi-cloud interconnection architecture, including inter-VPC/VPN routing and the 100G capacity roadmap.

Gaikai/Sony

Aliso Viejo, California

Senior Network Engineer

Jan 2017 – May 2018

- Managed network planning, design, and operation of WAN, edge peering, load balancing, VPCs, and data centers for PlayStation Now's latency-sensitive game streaming services.
- Designed and implemented routing and load-balancing changes that reduced intra-regional latency by 2-4ms, directly improving the end-user gaming experience.
- Led new technology evaluations and testing for RDMA/RoCE, commodity hardware, and IPv6 to prepare the infrastructure for next-generation streaming demands.

Microsoft

Boulder, Colorado

Senior Engineer, Network Strategy and Planning

Mar 2014 – Jan 2017

- Launched a global network-performance improvement program, authoring comprehensive documentation and delivering training to unify practices and drive cross-organizational adoption of new standards.
- Co-led projects to build capacity and onboard 4+ Tbps of Windows Update traffic from external CDNs, optimizing peering and backbone utilization, and reducing latency.

Juniper Networks

Denver, Colorado

Systems (Sales) Engineer

May 2012 – Aug 2013

- Engaged in all aspects of pre-sales and post-sales engineering for a global service provider, developing consultative relationships with technical and executive decision-makers.
- Led architecture and design reviews, translating complex customer requirements into scalable, high-performance network solutions using Juniper technologies.
- Played a key role in transforming initial resistance into success, helping the team exceed quota and deliver over \$40 million in sales revenue.

Infocrossing/Wipro**Staff Engineer/Network Architect**

Broomfield, Colorado

Jul 2010 – May 2012

- Defined, evolved, and implemented backbone and data center architectures for a major managed services provider (MSP), delivering solution designs for enterprise clients.
- Developed and deployed network designs that reduced operational costs by 10-30%, increased capacity by 1000%, and improved availability from <99.5% to 99.99%.

Intelepeer**Principal IP Engineer**

Denver, Colorado

Mar 2009 – Jun 2010

- Hired to stabilize, redesign, document, and rebuild the network of a wholesale VoIP carrier, achieving a 30% reduction in OPEX and improving availability from <95% to 99.99%.

Yahoo!**Tech Lead, Senior Network Engineer**

Sunnyvale, California

May 2007 – Feb 2009

- Co-led global teams to unify disparate worldwide ASNs into a single network spanning Singapore to Switzerland with zero downtime.
- Converted the backbone IGP from OSPF to IS-IS and tuned RSVP-TE to optimize global traffic flows.

Alcatel-Lucent NZ**Principal Engineer**

Wellington, New Zealand

Aug 2006 – May 2007

- Lead Architect on complex solution design projects for Telecom New Zealand, designed and tested L3VPN-based products to support the rollout of "Quad Play" services.

tw telecom**Lead IP Network Engineer**

Denver, Colorado

Jun 2005 – Jul 2006

Terremark**Lead Network Engineer**

Miami, Florida

Jan 2004 – Jan 2005

Fusiontel**Senior IP Engineer**

Fort Lauderdale, Florida

Sep 2002 – Jan 2004

USA.net**Network Engineer**

Denver, Colorado

Mar 2001 – May 2002

Various**NOC Technician**

Denver, Colorado

Nov 1999 – Jan 2001

U.S. Marine Corps Reserve**Lance Corporal**

Jan 1998 – Apr 2002

PROJECTS AND AFFILIATIONS**YACHT Another Custom Hugo Theme**<https://github.com/ejsdotsh/yacht-hugo-theme>

YACHT is a theme for the Hugo static site generator using the Catppuccin Palettes, HTML5, and CSS3 (SCSS).

EJ's CV (template)<https://github.com/ejsdotsh/ejscv>

Rewriting my LaTeX CV as a Typst template that uses schema-validated YAML for data.

NANOG<https://nanog.org>

Panelist/Speaker, "Operational Experiences with SIP", NANOG 48

Feb 2010

Member of NANOG 78 Hackathon winning team

Feb 2020

DE-CIX<https://www.de-cix.net/>

Board Member, Customer Advisory Board

Aug 2014 – 2016

Colorado Chapter of the Internet Society<https://coisoc.org>

Vice President

2011 – 2016

Rocky Mountain IPv6 Task Force (RMv6TF)<https://www.rmv6tf.org/>

Steering Committee Member

2011 – 2016
