

Seasoned network architect and reliability engineer with 25 years of experience leading the conception, architecture, development, design, and implementation of software, hardware, and network systems and tools that improve the capacity, efficiency, operability, performance, reliability, and security of global backbone, cloud, data center, and enterprise networks. Proven track record of designing and deploying multi-terabit WAN, peering, and AI/ML data center networks.

TECHNOLOGIES AND LANGUAGES

networking Juniper - Cisco - Arista - ZPE - Cumulus Linux - Mellanox - PaloAlto - OPNSense - A10 - F5 - OSPF - IS-IS - BGP/MP-BGP - Anycast and Multicast - MPLS VPNs - RSVP-TE - EVPN - VxLAN - Zero-touch Provisioning - RoCEv2 - PFC/ECN - DCQCN

systems Linux/Unix administration - DNS, DHCP, IPAM - CI/CD - HTTP/HTTPS - Netbox - Nautobot - Infoblox - Podman - RANCID

observability and monitoring syslog - SNMP - netflow/sflow - Zabbix - Nagios - Kentik - ThousandEyes - Sensu - Splunk - PagerDuty - LibreNMS

development Go - Python - Bash - Make - Ansible - Nornir - Jinja - SQL - Git - Sapling/Mercurial - YAML - JSON - HTML - CSS - Pulumi - Terraform - OpenTofu - C - Java

cloud infrastructure Digital Ocean - Linode - AWS - GCP - VPC - CDN - Load Balancing

PROFESSIONAL EXPERIENCE

BayRockLabs

Santa Clara, California

Principal Network Engineer @ NVIDIA

Apr 2026 – Oct 2026

- Leading the architecture, design, and deployment of global-scale DC interconnects and EVPN/VXLAN fabrics for HPC, AI, and GPU computing clusters.
- Developing high-performance data center fabrics leveraging RoCEv2, PFC/ECN, and lossless Ethernet to meet stringent latency and packet-loss requirements for distributed AI training workloads.
- Driving automation strategy using Python, Go, and Ansible to manage configuration, compliance, and zero-touch provisioning (ZTP) across multi-vendor (Arista, Mellanox) environments.
- Partnering with systems, GPU, and HPC teams to deliver scalable, highly available networks for extreme-performance workloads, establishing best practices for audit, security, and compliance.
- Conducting risk assessments and designing incident response playbooks for AI cluster failures, ensuring rapid recovery and minimal disruption to critical research timelines.

Magnit, LLC
Network Engineer 5 @ Meta

Menlo Park, California
Oct 2023 – Oct 2025

- Contract-lead for cross-functional projects to design and deliver 3+ Tbps of WAN capacity for DC-interconnect, integrating EVPN/VXLAN fabrics for AI/ML workloads with stringent performance requirements (PTP, ROCEv2).
- Developed and maintained configurations for multi-vendor, multi-terabit WAN and data center network infrastructure supporting Meta's product engineering and research labs.
- Transformed the onboarding process from an eight-week experience into a week-long, team-specific curriculum used to onboard over 20 new CW and FTE engineers, significantly reducing time-to-productivity.
- Built observability and monitoring solutions to detect issues early, implementing blameless post-mortems to drive continuous improvement in network reliability and SLO attainment.
- Collaborated with architecture and deployment teams to ensure new implementations were supportable and aligned with production standards for high-availability environments.

Adobe
Senior Cloud Network Reliability Engineer

San Jose, California
Sep 2021 – Dec 2022

- Provided technical leadership for the global corporate network team, defining and implementing network engineering standards, patterns, and practices to optimize cloud-based solution delivery.
- Designed, deployed, and maintained Adobe's hybrid network and security infrastructure, including SDN, routers, switches, Palo Alto firewalls, wireless, DDI, and VRF segmentation.
- Championed SRE rigor by instituting blameless post-mortems, sustainable on-call rotations, and automated configuration management to reduce toil and improve SLO attainment.
- Partnered with Cloud Technology and product teams to translate complex business requirements into scalable network architectures, influencing design decisions for identity and security services.
- Developed and piloted next-generation network solutions, evaluating SDN controllers and monitoring tools to drive continuous improvement in performance and resilience.

Box
Senior Network Engineer

Redwood City, California
Nov 2019 – Sep 2021

- Led cross-team initiatives to design, provision, and enhance the global WAN, data center, peering, and multi-cloud infrastructure underpinning Box's hyper-scale SaaS platform.
- Engineered and maintained automation frameworks (Ansible, Python, Jinja, Puppet) for configuration generation, ZTP, upgrades, and day-to-day operation across Arista, Juniper, and white-box Cumulus devices.
- Established and enforced network standards and best practices aligned with strict audit and compliance requirements, collaborating closely with security teams on network controls.
- Partnered with NRE to overhaul network monitoring and observability with Sensu, PagerDuty, LibreNMS, and Splunk, significantly improving alert utility and signal-to-noise ratio.
- Participated in on-call rotation, driving permanent fixes through root-cause analysis rather than reactive workarounds to reduce recurring incidents.

HERE Technologies
Principal Network Engineer

Alpharetta, Georgia
Aug 2018 – Oct 2019

- Introduced Ansible-based automation to enforce compliance, improve standardization, and reduce deployment times across global hybrid multi-cloud network infrastructure.
- Performed extensive troubleshooting to identify software bugs and rewrote QoS policies, resolving long-standing issues and improving global throughput by 5-10x.
- Led the edge network redesign and hybrid multi-cloud interconnection architecture, including inter-VPC/VPN routing and the 100G capacity roadmap.

Gaikai/Sony**Senior Network Engineer**

Aliso Viejo, California

Jan 2017 – May 2018

- Managed network planning, design, and operation of WAN, edge peering, load balancing, VPCs, and data centers for PlayStation Now's latency-sensitive game streaming services.
- Designed and implemented routing and load-balancing changes that reduced intra-regional latency by 2-4ms, directly improving the end-user gaming experience.
- Led new technology evaluations and testing for RDMA/RoCE, commodity hardware, and IPv6 to prepare the infrastructure for next-generation streaming demands.

Microsoft**Senior Engineer, Network Strategy and Planning**

Boulder, Colorado

Mar 2014 – Jan 2017

- Launched a global network-performance improvement program, authoring comprehensive documentation and delivering training to unify practices and drive cross-organizational adoption of new standards.
- Co-led projects to build capacity and onboard 4+ Tbps of Windows Update traffic from external CDNs, optimizing backbone utilization and reducing latency.

Juniper Networks**Systems (Sales) Engineer**

Denver, Colorado

May 2012 – Aug 2013

- Engaged in all aspects of pre-sales and post-sales engineering for a global service provider, developing consultative relationships with technical and executive decision-makers.
- Played a key role in transforming initial resistance into success, helping the team exceed quota and deliver over \$40 million in sales revenue.

Infocrossing/Wipro**Staff Engineer/Network Architect**

Broomfield, Colorado

Jul 2010 – May 2012

- Defined, evolved, and implemented backbone and data center architectures for a major managed services provider (MSP), delivering solution designs for enterprise clients.
- Developed and deployed network designs that reduced operational costs by 10-30%, increased capacity by 1000%, and improved availability from <99.5% to 99.99%.

Intelepeer**Principal IP Engineer**

Denver, Colorado

Mar 2009 – Jun 2010

- Hired to stabilize, redesign, document, and rebuild the network of a wholesale VoIP carrier, achieving a 30% reduction in OPEX and improving availability from <95% to 99.99%.

Yahoo!**Tech Lead, Senior Network Engineer**

Sunnyvale, California

May 2007 – Feb 2009

- Co-led global teams to unify disparate worldwide ASNs into a single network spanning Singapore to Switzerland with zero downtime, while converting the backbone IGP from OSPF to IS-IS.

Alcatel-Lucent NZ**Principal Engineer**

Wellington, New Zealand

Aug 2006 – May 2007

- Lead Architect on complex solution design projects for Telecom New Zealand, designing L3VPN-based products to support the rollout of "Quad Play" services.

tw telecom**Lead IP Network Engineer**

Denver, Colorado

Jun 2005 – Jul 2006

Terremark**Lead Network Engineer**

Miami, Florida

Jan 2004 – Jan 2005

Fusiontel**Senior IP Engineer**

Fort Lauderdale, Florida

Sep 2002 – Jan 2004

USA.net
Network Engineer

Denver, Colorado
Mar 2001 – May 2002

Various
NOC Technician

Denver, Colorado
Nov 1999 – Jan 2001

U.S. Marine Corps Reserve
Lance Corporal

Jan 1998 – Apr 2002

PROJECTS AND AFFILIATIONS

YACHT Another Custom Hugo Theme

<https://github.com/ejsdotsh/yacht-hugo-theme>

YACHT is a theme for the Hugo static site generator using the Catppuccin Palettes, HTML5, and CSS3 (SCSS).

EJ's CV (template)

<https://github.com/ejsdotsh/ejscv>

Rewriting my LaTeX CV as a Typst template that uses schema-validated YAML for data.

NANOG
